

Supplementary Figure 2

Volcano-plots showing the comparison between each ASO and the mock treated cells were displayed per group. One row for each group. The  $\log_2$  fold change on the x-axis is plotted against the log transformed ( $-\log_{10}$ ) adjusted p-value. Light gray dots represent genes showing no differential expression (adjusted p-value ( $p\text{-adjust}$ )  $> 0.05$ ). Dark gray dots show genes with  $p\text{-adjust} \leq 0.05$ . Genes that were targeted by the particular ASO were indicated by +. For all ASOs the + for *IDO1* is additionally marked.
